

Great Value Tachograph Analysis Software.

We have been using "Pitstop" tachograph analysis software from Rocksand Computers Ltd for over 5 years and have found this system to be very cost effective when compared to alternative software packages or bureau analysis contracts.

The Pitstop system is easy to understand and operate and there is a built in help system that includes both a quick start guide and a full system manual. Pitstop can interface with all the usual tachograph and card download devices and accepts input from a wax chart scanner for those still using analogue tachograph units. Data input can also be from other common sources such as csv files, which is very useful when vehicle and card data is downloaded in remote locations.

Pitstop has a suite of commonly used reports which can be produced in a wide variety of formats including exporting to Excel for additional analysis should this be required. There is also a facility to Email reports as required.

Pitstop includes user adaptable reminders for all required events such as card downloads

In addition to the tachograph analysis functions, Pitstop has the ability to flag up vehicle events such as Tax, Insurance, MOT, Safety Inspections and Servicing.

Several updates released during the period of our use have provided enhanced functionality without additional cost or an expensive service contract.

We are not associated with Rocksand Computers Ltd other than being a very satisfied customer and happily recommend the Pitstop system to other fleet operators both large and small. You can try before you buy by downloading the trial version from the Rocksand Computers website.
